Verification Report for Token:

AstroShib (ASHIB)

Badge Information

- **Badge Type: Verified**
- **Initiation Fee Paid:** **Yes**
- **Date of Review: 2025-05-04**
- **Reviewed By: BloodyBelgian**

Verification Checklist

Criteria	Status (✔/✘)	Notes/Comments
Official website	✔	Available
Whitepaper	✔	Includes tokenmocis and tax structure
Active social media accounts	✔	Verified X(Twitter)
Clear contact details	✘	No Contact form on the website, unable to contact via X, even for verified accounts.
No scam reports from the community	✔	No known reports or flagged issues
AI audit of linked smart contracts	✔	0 Risky iyems 1 Attention item (Buy & Sell Tax)

Summary and Recommendations

Overall Assessment: PASS

Key Findings

🟢**Finding 1: Proper use of `_update()` for tax logic:**

- The contract correctly overrides `_update()` (instead of `_transfer`) for compatibility with OpenZeppelin v5.
- Taxes are only applied when both `from` and `to` are non-zero addresses and neither is tax-exempt.

🟡**Finding 2: Potential impact on DEX functionality (Buy/Sell Tax)**

- If decentralized exchange contracts (e.g., Uniswap routers or liquidity pools) are not excluded from tax, users may receive less tokens than expected when buying or selling.

- ⚠️ Attention required: These contracts should be added to the tax exemption list using `excludeFromTax(...)` to ensure seamless trading.

🟢 **Finding 3: No reentrancy or unsafe logic detected**

- All transfers use `super._update(...)`, maintaining OpenZeppelin's internal safety checks.

- The `burn()` function is safe and correctly calls the internal `_burn()`.

🟢 **Finding 4: Tax rates are fixed and transparent**

- All tax rates are hardcoded using basis points (bp) and cannot be changed after deployment.

- This builds user trust and guarantees no hidden tax changes post-launch.

🟡 **Finding 5: Transfer to self still taxed**

- If someone transfers tokens to themselves (same `from` and `to`), tax is still applied. This is technically unnecessary and could be exempted.

Next Steps / Actions / Recommendations:

🔷 **Publish a clear roadmap with milestones (e.g., marketing, CEX listings, DApp utility, staking, governance) to provide direction and build trust with the community.**

🔷**Release a condensed whitepaper or one-pager that centralizes all key information supply, taxes, team wallets, use-cases, and roadmap in one place for quick reference.**

This report is prepared by the Nodalis Verification Team to ensure quality, trust, and security for all listed projects.
